BLOCKCHAIN TRADING WORLD

BUY&SELL PLATFORM

a. DESCRIPTION

BUY&SELL is the first international online classified website the uses block-chain technology. Private and business ads for goods and services will be posted on the website in the near term. The total global market for classified websites is over \$ 18 billion.

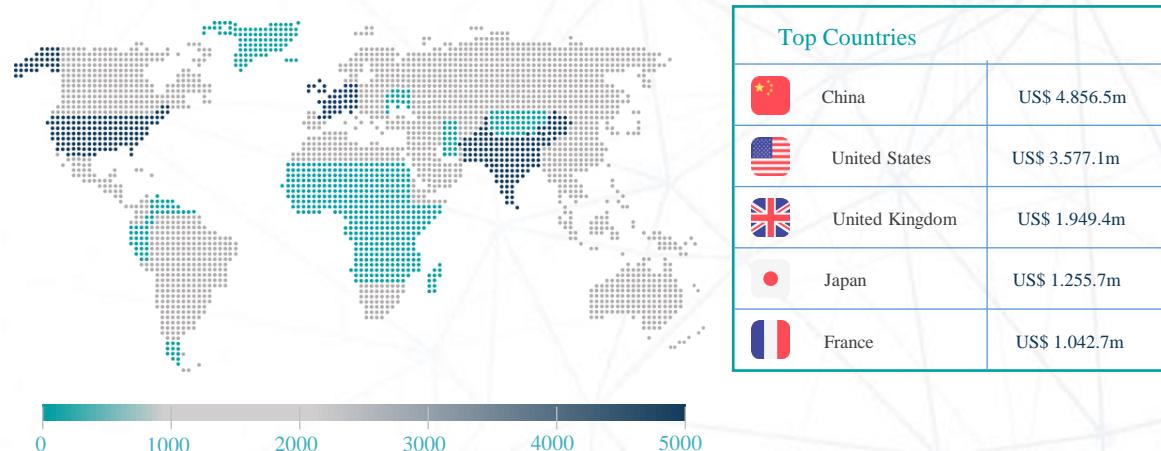

Source: Statista, March 2017: Selected region only includes country listed in the Digital Market Outlook

Day-to-day goods will be placed on this platform, which can be purchased for internal tokens at the current market rate. Users all over the world will be able to change tokens for goods with the future delivery through the International services.

A distinctive feature of classified advertising is the high profit margin. According to the report by the Norwegian media group named Schibsted, the EBITDA margin is 68% for French classified advertising (Leboncoin.fr), 51% for Sweden's Blockset.se, and 41% for the Norwegian Finn.no.

BLOCKCHAIN TRADING WORLD

Trading tendency among people has become increasingly globalized due to the tension between states and the linguistic barriers have been cleared. That is why, courier services are efficient and effective since products are delivered globally within a time frame of few days.

Source: Statista, March 2017: Selected region only includes country listed in the Digital Market Outlook

b. PROBLEMS AND SOLUTIONS

- **Fraud** - with the help of the blockchain technology there will be no scammers on typical classified websites, making shopping safe.

- **Incorrect information about the product** – it will be possible to track the history of any purchased products on **BUY&SELL**. Also, it will be possible to place a complaint against the incorrect description of goods or failure to comply with the declared state, for example, the condition and car-mileage.

- **Lack of confidence** - The main problem of all classified websites is the lack of confidence among buyers and sellers, that is why our system will contain smart contracts on the ethereum. Regarding deception, the transaction can be prevented even if the transaction has already passed and the buyer has already transferred the money, it will be possible to conduct a counter transaction.

BLOCKCHAIN TRADING WORLD

Unfortunately, we can not do anything about such offenses. As a result, buyers receive wrong products or lose money. All these problems will be successfully solved with the help of **BUY&SELL** platform created by the block-chain technology.

All existing cryptocurrencies will be supported by the platform. The exchange rate will correspond to the market rate at the time of the transaction.

In the current classified system, communication is built only between the seller and the buyer. Our project provides a unique option - buyers will be able to communicate with each other, clarifying technical issues, share views and leave feedbacks.

c. BUY&SELL WORKING PRINCIPLE

1. The user accesses **BUY & SELL** and registers an account.
2. During a new account registration process , the system creates a user profile and an electronic wallet based on the existing crypto-currency in the system - BAS token.
3. The user fills out the registration form in detail, including links to his profiles on social networks, it is necessary to complete the work of the analytical system in the **BUY & SELL** platform.
4. Once the user has access to his account, he will be able to put the number of BAS tokens he needs on his created wallet. You need to use the system of account replenishment.
5. The user will be able to use one of many appropriate ways of the account replenishment for the purchase of BAS tokens. Processing companies will be involved in payment. For example, you can buy BAS tokens simply using your credit card.

BLOCKCHAIN TRADING WORLD

6. If the user has some other crypto-currency, the system will instantly exchange the user's tokens to BAS token using existing exchanges such as Coinbase and others.
7. If you need to sell your product, the user should fill out a form, describing in detail the criteria and properties in the appropriate fields, set the price range and other terms of sale.
8. By filling in all or the largest number of fields, the analytic mechanism of the BUY & SELL platform can recommend this product and this seller to other market participants-consumers who were interested in products of this category on the platform, as well as searching for them through social networks or other communication channels.
9. If you need to purchase a product, the platform would help you to find the appropriate product on the basis of the level of the seller's trust and the product group.
10. The system will store the history transactions of each account, that would help to increase the level of trust to the buyer / seller, thereby providing the most reliable and verified information about goods that the parties need.
11. The blockchain network will be used to store all information about the sale and purchase of goods and services. This should enable transparent, honest and secure transactions for the above-described classified website.
12. For each transaction there is a commission of 1.5% of the total amount of the transaction. Most of this commission will be received by holders of BAS tokens following the results of each financial period. The rest of the commission will be charged by BUY & SELL.

BLOCKCHAIN TRADING WORLD

d. THINGS TO KNOW ABOUT **BUY&SELL**

Market relations, mutual benefit, purchases and sales are the key to most of markets and personal relationships in the world. The growth of the company's capitalization becomes exponential to traffic.

Over the past twenty years the number of transactions on the World Wide Web has been increasing every day. According to the estimates agencies, this growth is estimated to be around 30-40%. The same can be said about the growth of the advertising market placed on the Internet.

This situation happens in spite of so-called world crisis. To date, there are a lot of companies that sell their products on the Internet. It does not require any investment to start earning on our platform through reductions of operational costs.

Regardless of your location, you will be able to manage individual accounts in the social network, offer goods and services, recruit employees, search and compare prices of goods on the Internet.

Our decentralized platform for indexing and processing of information makes it possible to process.

BLOCKCHAIN TRADING WORLD

e. BUY&SELL PLATFORM BENEFITS

- ❯ - Free publicity of your goods and services
- ❯ - Low service costs through technological innovation
- ❯ - Interaction between sellers and buyers without intermediaries
- ❯ - Minimization of the time of recruitment and selection of staff
- ❯ - Procurement of goods and services directly

f. COMPONENTS OF BUY&SELL

g. SOCIAL MEDIUM

BUY&SELL Platform – is not only a social network for business, but also a rooted search system for goods. It includes automatic information and data collection from the Internet, free placement in the system and re-indexing data. One more benefit and a sign of developing of BUY&SELL Platform is the ability to compare the prices of goods in all stores directly on the product card.

Everyone will get a unique opportunity to find any goods presented by shops on the Internet, see all the stores, and compare prices to determine the choice.

We believe and advocate that information about stores, prices, and price changes on the market should be transparent. You cannot trust commercial companies that have their own commercial interests. The **BUY&SELL** has all data about all price changes in all online stores around the world. Everyone will have access to the full analytics of the entire Internet market of trade.

At the moment many investors and bankers are talking about blockchain technology as a technology of the future, which will affect the future of the world even more than the appearance of the Internet. These are not just words; more than a billion dollars had been invested in the projects based on the blockchain in 2016. Next, we will write about blockchain, about relation with bitcoin and about directions that are already used and will be used in the future.

ABOUT THE BLOCKCHAIN

The English word **blockchain** contains two words: block and chain. Each transaction in this technology is recorded in the system as a new link in the chain that automatically captures digital information about the entire circuit. Blockchain is called as a distributed registry.

Explaining in simple words how the blockade works, experts compare each transaction with a microscopic DNA molecule containing information about the entire living organism.

The unauthorized data change is impossible - the system does not agree and reject the operation, as in biology, where the human body rejects foreign cells and tissues.

"The blockchain is an incorruptible digital ledger of economic transactions that can be programmed to record not just financial transactions but virtually everything of value."

*- Don and Alex Tapscott,
authors of Blockchain
Revolution (2016).*

BLOCKCHAIN TRADING WORLD

AVAILABILITY AND SECURITY OF BLOCKCHAIN ARE INSURED BY...

Huge computing power included in mining.

Complex mathematical algorithms.

Cryptographic programs.

Theoretically, it's possible to hack the blockchain system. However, in practice, the resources spent on that will be higher than the benefits; this aspect always stops all intruders.

Thus, blockchain makes it possible to store data on financial transactions, legal obligations, property rights, providing full transparency and universal accessibility for familiarization, but at the same time reliably protecting against any forgery, hacking and so on. In simple terms, the technology of the blockchain system is the kind of glass cube with a security camera- it can (under the supervision) put something new in it, but when you try to change or substitute the content, this will be visible to any observer immediately.

Today, on the one hand, the concepts of blockchain and crypto-currency remain inseparable, since this technology is used both in transactions with bitcoin and other crypto-currencies.

On the other hand, the potential application of blockchain technology is incomparably larger; it can be used to create a huge number of databases, registers, inventory books, services for business. And including new payment systems operating legally (controlled by government authorities).

BLOCKCHAIN TRADING WORLD

FIELD OF BLOCKCHAIN TECHNOLOGY APPLICATION

The essence of the chain of blocks, as a public, distributed and reliable database makes the use of blockchain very attractive for companies working in various fields. Currently, there are already some extensions for the development of business applications on the blockchain, providing:

1. Secure network administration, eliminating MIM hacker attacks ("the person in the middle") and eliminating the problem of "single administrator".
2. Storage of digital certificates, which completely protects users' access to websites (in particular, excluding password interception).
3. Safe bilateral transactions without a third party, (law firm, notary, bank, etc.).
4. Fix a time limit to the placement of documents, solving issues of patenting, copyright, etc.
5. Confirm the authenticity of the product with the help of a secure certificate.
6. Confirmation of rights to any property.
7. Creation of public electronic business cards, information is automatically updated even after "distribution" on Internet resources.
8. DNS system, invulnerable to DDOS attacks, and much more.

BLOCKCHAIN TRADING WORLD

Using the blockchain, it is possible to create open registres where all the transactions will be recorderderd and , what's more, the verefifications of you payments will be provided by the system. In our life there is no need for a notary to receive confirmation from his colleagues to make a specific entry in his book, for example, when issuing a power of attorney.

According to the technology blockchain, confirmation is necessary, plus the data must be encrypted with a special code, after passing them through the miner . However, the proponents of privacy cannot be afraid – the information on the operations will be recorded in the system, while private information (identity, etc.) will not be available for open access. Technology is also great for applications within e-government.

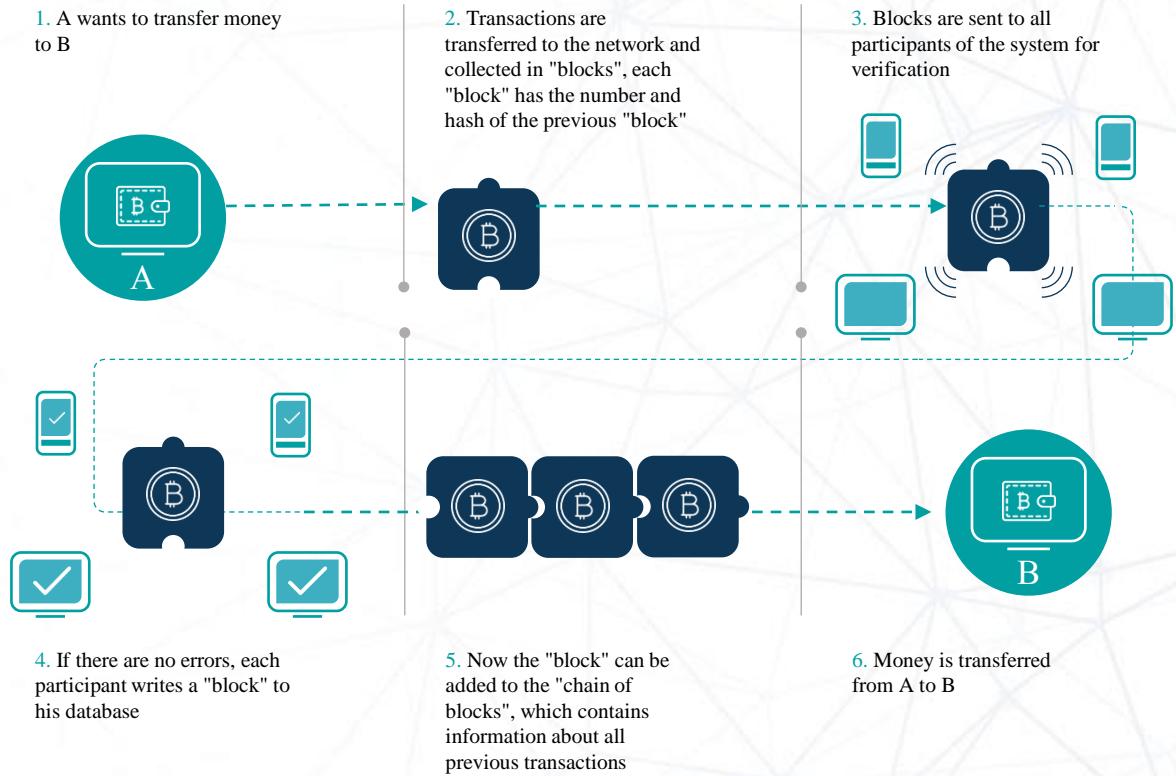

,,Imagine the number of legal documents that should be used that way. Instead of passing them to each other and losing track of versions, why can't all business documents become shared instead of transferred back and forth? So many types of legal contracts would be ideal for that kind of workflow. You don't need a blockchain to share documents, but the shared documents analogy is a powerful one.”

- *William Mougayar, venture adviser, entrepreneur, marketer, strategist and block specialist.*

BLOCKCHAIN TRADING WORLD

HOW DOES BLOCKCHAIN WORKS

The American research center RAND Corporation released a report in January 2016 calling to resist both the cryptocurrencies and the technologies by which they function. The authors of the report argue that the public's interest in technologies like blockchain is a threat to US national security.

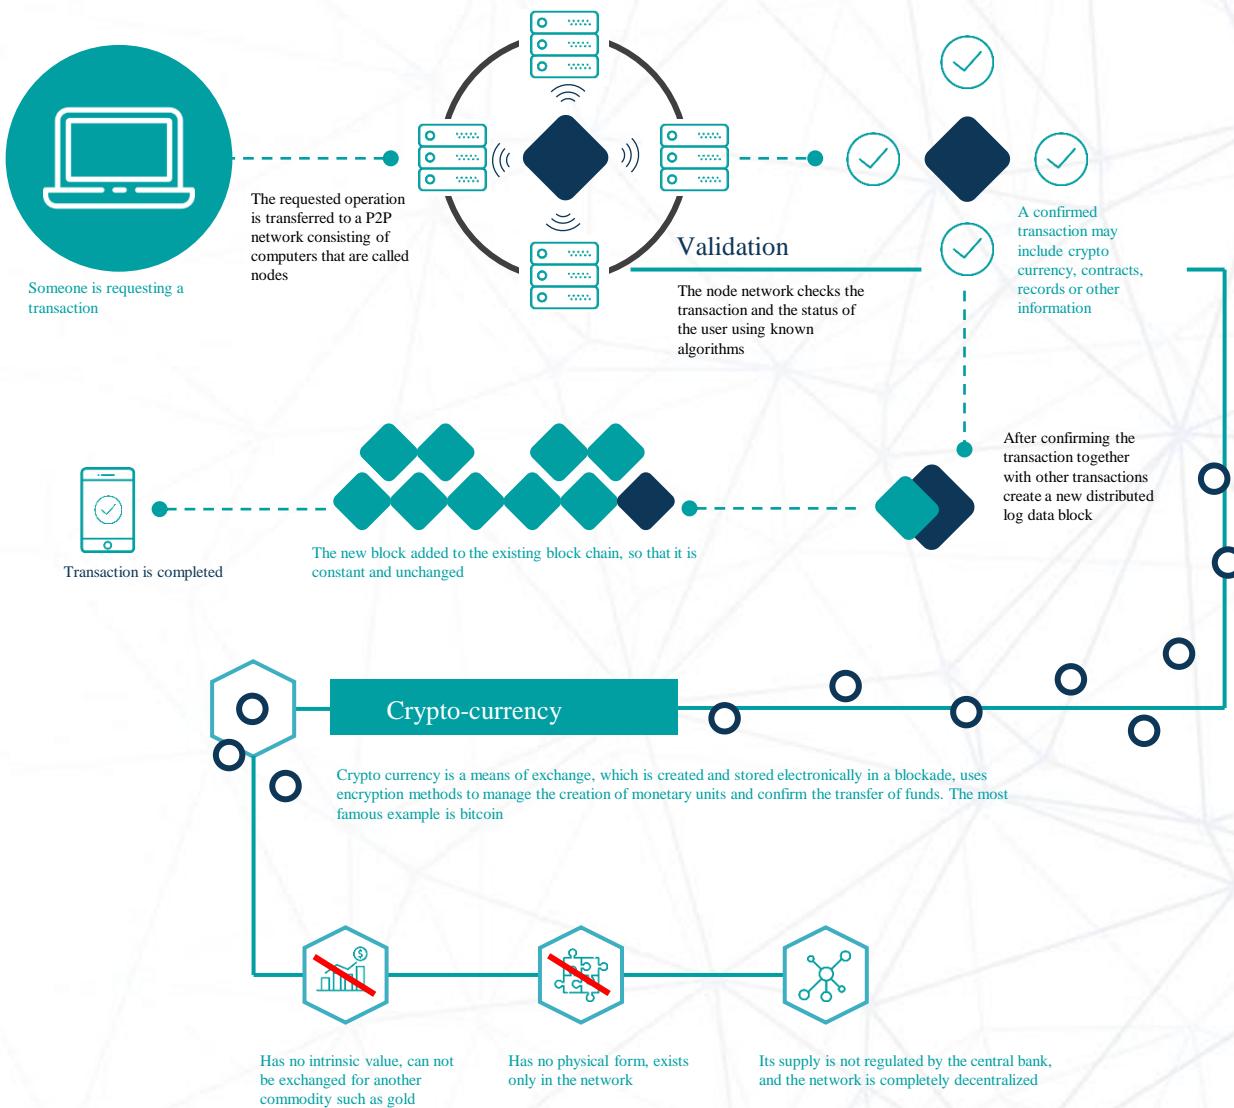

In the meantime, over 40 of the largest banking institutions, including Goldman Sachs, Barclays, Bank of America, JP Morgan, have joined the R3 consortium to jointly explore new technology. Credit organizations understand they haven't caught up yet with the latest technologies, and prefer to use them in their own interests, including reducing of costs.

BLOCKCHAIN TRADING WORLD

The Association of Professional Bankers is also looking at blockchain technology for payment solutions such as interbank payment system without a transfer through SWIFT.

In addition, banking organizations need to exchange certain information (scammers, for instance). A software product based on a chain of blocks will allow information to enter for general use into a transparent public database.

HOW IT WORKS

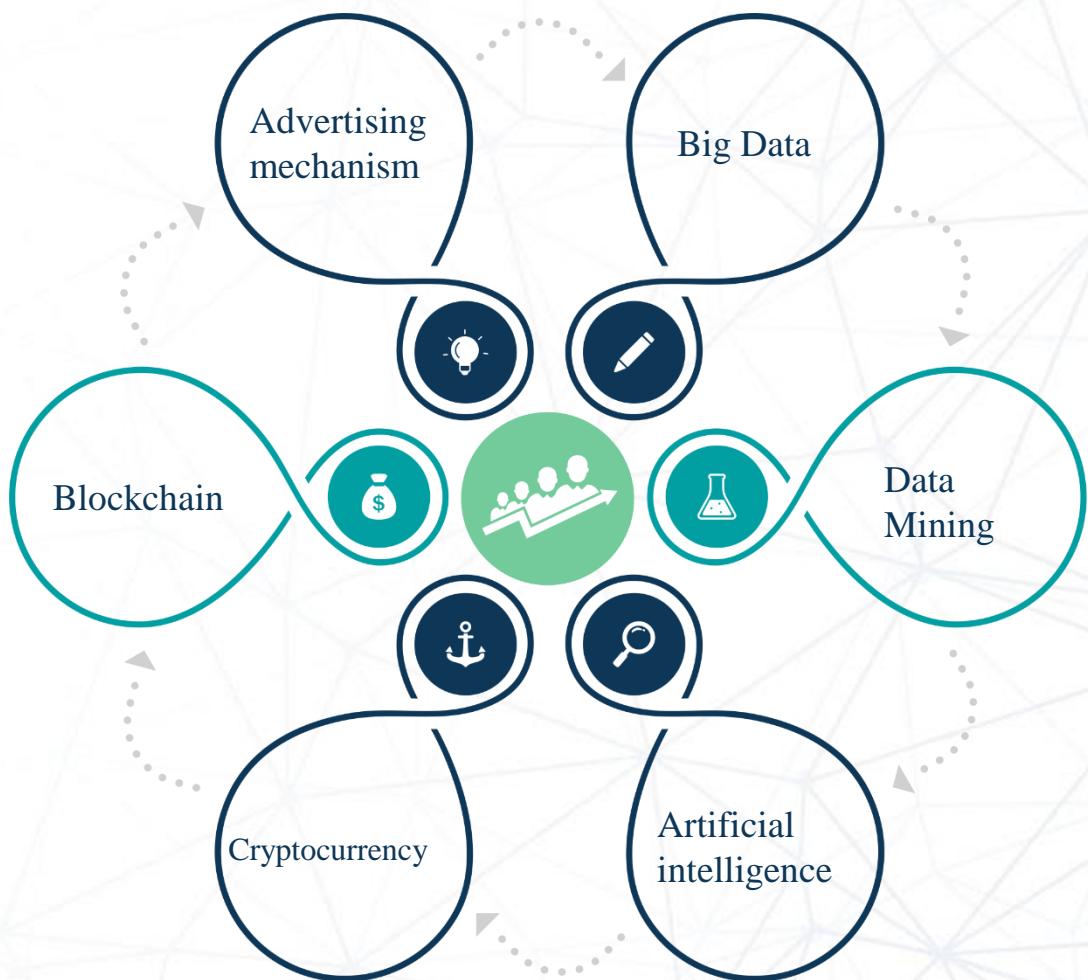

BLOCKCHAIN TRADING WORLD

After you have found the right product on the Internet, reviewed all the stores and offers of private buyers, compared prices, chose the appropriate terms of delivery, we provide an opportunity to purchase this product in an internal cryptocurrency (SHT).

All users of our service will be able to use services for free. You can solve their problems in business independently without huge costs. This was based on technologies such as **Big Data, AI, Data Mining, universal high-tech mechanism of direct response advertising.**

I TECHNOLOGIES

BLOCKCHAIN TRADING WORLD

BIG DATA

The usage of Big Data contributes to the profitability of the company in marketing.

The basic functions of using Big Data:

- ➊ The target audience of customer acquisition on the World Wide Web
- ➋ Evaluation of customer satisfaction;
- ➌ Checking if the expectations and needs of customers are met or not;
- ➍ Searching and introducing new options for increasing trust;
- ➎ Creation of projects and product offers that are in demand;
- ➏ Realization of a quick search for similar goods, substitute goods;
- ➐ Analysis of a large amount of incoming information to choose the best option.

In order to project growth rates and make a marketing strategy, you need full information. Big Data is the most accurate tool for a marketer which helps in forecasting the company's future and setting the target audience, demanding consumer activity and interests.

It should be noted that this targeted advertising is shown only to those potential buyers who are really interested in the product or service.

DATA MINING

We live in a world where there is a lot of different information, and people are not physically able to analyze it on their own. In order to collect data automatically, to reveal hidden patterns, to discover unexplored source data, characteristic knowledge, to make a practical use, you need to use Data Mining, which serves to make decisions in all aspects of human life.

BLOCKCHAIN TRADING WORLD

When the information is received, the necessary information is revealed in various aspects of our world. This mechanism should be used to solve any business situations.

Instead of traditional information processing algorithms this clever program uses such disciplines to gather information like statistics, algorithmization, artificial intelligence, database theory, visualization and many others.

The detected patterns are a large flow of information that can meet objectives and be useful from a practical point of view.

The principle of operation is very simple:

With the help of artificial intelligence, generalized data on customers is collected, based on their tastes, desires, choice, various factors, etc.

It helps to identify offer of goods that meet the requirements of potential customers. Based on this, it is possible to compose demand for goods and services of mass consumption.

Based on this information, companies can determine the cost of produce, determine the appropriate size of inventories and also calculate the number of employees in business processes.

If you need to **list** a new product to the market, to identify a seasonal offer, then this will be good help for you.

BLOCKCHAIN TRADING WORLD

ARTIFICIAL INTELLIGENCE

There is a probability to attract numerous potential customers thanks to AI, simply because it has no analogues in the world among artificial intelligence.

On this basis, various logical reasoning is created, that takes the high-level mental processes as a model - all this became possible thanks to AI.

We all know that it's very important to use advertising spam correctly, and at the right time to be able to show an advertisement of goods or services to a potential customer. Our platform can solve this problem and can make a prediction of the demand for certain goods or services, based on the user's request.

UNIQUE INNOVATIVE ADVERTISING MECHANISM

The **BUY&SELL Platform** allows the users to promote productively their products and services with minimal investment and build a unique algorithm for targeted advertising.

The advantage is the lack of priority among users who place their ads. In order to increase the demand for tokens and to promote a constant increase in their value in the future, we set the 100% cost of paying targeted advertising using BAS tokens.

BLOCKCHAIN

Full decentralization of user data and content is secure, clear and reliable and it serves as an advantage for our platform. In practice, the data is processed very quickly which indicates a high speed platform. It should be noted that the probability of data loss, attack of transactions is completely excluded. Thanks to decentralization, you will be immune to 99.9% of information-related attacks. This significantly reduces the cost of servers and the construction of data centers. As a result, a positive impact on the reliability of potential customers is anticipated and the profitability of the company is increased.

BLOCKCHAIN TRADING WORLD

Cryptocurrency

Everyone is available to purchase cryptocurrency. Also, you will receive a certain amount of BAS token that corresponds to its internal initial cost and guarantees a percentage of the company's profits according to the size of the partner's investment during the ICO campaign.

You must take part in the profits of the company. At the end of the ICO, the company's profits will be divided among all token owners in accordance with their investment size.

The working IT platform supports not only the value, but also the liquidity of the cryptocurrency. Promotion of the additional demand for tokens is due to the fact that you replenish the balance and pay targeted advertising using BAS tokens with a 100% discount.

BAS TOKEN

BAS token holders are entitled to receive a part of the company's profit.

Each token holder can:

Receive a portion of the profits commensurate with the size of the investment.

Next is the distribution of 20% of the profit among all realized BAS tokens based on the final results of the ICO.

MONETIZATION

BAS tokens can be used for the following services of the BUY&SELL platform:

- Subscriptio to the latest offers
- Selecting your own outlets
- Special placement of own branches
- Priority update of the field
- Getting platform analytics
- Buy and sell goods
- Buying Advertising
- Create and promote online stores and trading platforms
- Vote and raise the status and version of your account on the social network
- Purchase and sell tokens to other participants in the **BUY&SELL** platform
- Purchase and sell BAS tokens on the exchanges
- Earn BAS tokens, which helps in the development and promotion of the platform **BUY&SELL**

Number of tokens is limited

120.000.000 is the largest number of BAS tokens.

Starting price

\$0.1

Terms of Payment

Based on the existing rules of the ICO campaign, according to the final results of each fiscal year, 40% of revenue is transferred to the ETH wallet. In the future, the profit can be spread among the holders of tokens **Buy&Sell** (BAS) according to the rules of the smart contract.

BLOCKCHAIN TRADING WORLD

ICO STRUCTURE

Based on the existing rules of the ICO campaign, on the final results of each financial year, 40% of the net operating profit is transferred to the ETH purse and in the future the profit is distributed among the holders of the BUY & SELL (BAS) tokens.

Total number of tokens = 120.000.000

Distribution of BAS tokens:

Investors
75% | **67.500.000**

BUY&SELL Co
20% | **18.000.000**

Bounty
5% | **4.500.000**

BONUSES. THINGS TO KNOW

ICO will be divided into 2 stages. The percentage of token bonuses will decrease due to the reduction of time to complete each stage of the ICO.

PRE-ICO

25% of tokens can be sold

The cost of the token is \$ 0.1

ICO

75% of tokens can be sold

The cost of the token is \$ 0.1

BLOCKCHAIN TRADING WORLD

ROAD MAP

| TEAM

Marchenko Sergey **FOUNDER / GENERAL DIRECTOR**

Marchenko Sergey began his career as an Internet entrepreneur at a young age in his hometown. At his 36, Sergey is an Internet entrepreneur, software developer, blockchain enthusiast and an amateur. His strengths are in network programming, automation, scaling and project management - the development of techniques, tactics and business strategies. He has found success through fruitful partnerships with likeminded people and entrepreneurs, some of whom he has known since the emergence of Internet entrepreneurship in the territory of the xUSSR.

Orlovsky Artem **FOUNDER / TECHNICAL DIRECTOR**

He graduated from the Moscow Aviation Institute. He has been working in e-commerce business since 2010. Founder and owner of four online stores. All stores still exist and bring good profits. He has a good knowledge of web analytics systems. Developer of loyalty programs, web usability estimates, calculation of basic metrics in e-commerce. He also produces products under his own registered trademark in factories in China. He sees great perspectives of the development of the industry's blockchain around the world.

Viczewski Arvi **TECHNICAL LEADER**

Over the past 20 years Arvi has developed and improved many successful Internet companies. Most recently, Arvi brought his extensive organizational experience to the field of Internet pharmacology and became known as a practicing co-owner of a working partner program of the highest level. Combining strong technology base and experience in business management, Arvi continues to achieve success.

BLOCKCHAIN TRADING WORLD

Golikov Nikolay LEADING PROGRAMMER-DEVELOPER

Nikolai is a resourceful and purposeful internet contract programmer, a blockchain enthusiast, a general-purpose programmer and an idealist. His main focus in cryptography has always been on utilitarian and basic implementation, and desire to develop more stable blockchain links. Nikolai is on the move, likes traveling in Southeast Asia, and loves his daughter Anna and dreams of working in the corporation known as Google.

Mikheev Ivan PROGRAMMER DEVELOPER

Ivan has more than eight years of experience in developing mobile applications, UX / UI design and digital marketing.

As the head of the department of innovative media trends in Samsung Russia, he was actively engaged in research and promotion of solutions that are now changing the face of the mobile application industry.

Enthusiastic programmer, he discovered the blockchain and crypto-currencies, so now he devotes his time to the development of the crypto community in the Buy&Sell project.

Surikov Evgeny CTO

Evgeniy has extensive experience in mathematics and cryptography (PKI, AES / DES / GOST28147, RSA / DSA / ELGAMAL, ZKP). He also has experience in distribution technologies, blockchain technologies (IOT, Healthcare, Travel, Finance, and Government) and Java / C / C ++.

Mashkova Elizabeth BACKEND DEVELOPER

Lisa has experience in the Mail.Ru Group (Russia), she is a clever and beautiful woman. She understands in detail the Java stack: Java / Kotlin, RxJava, Android SDK (+ Dagger), Spring, Hibernate, Maven / Gradle, JVM languages: Java, Scala, Kotlin, Groovy, and Clojure, Functional languages: Haskell, Idris, Agda, Android development

BLOCKCHAIN TRADING WORLD

Vyshenko Pavel PROGRAMMER, BLOCKCHAIN DEVELOPER

Paul has more than 10 years experience in programming. He worked at OJSC John-Deere-Russia, began from trainee to engineer of high quality. Then he took part in the project in the Department of Information Technologies-Control Systems of the Institute of Computer Science and Technology of the St. Petersburg Polytechnic University. Pavel has experience in software verification using formal methods, object-oriented programming and design, web programming, software configuration management, test automation.

Ravensky Denis COMMUNICATIONS SPECIALIST

Denis is the owner of business, an entrepreneur, a cryptocurrency miner and a blockchain enthusiast. He has more than 5 years of experience in the industry of cryptocurrency and blockchain, as well as 10 years of experience in sales and business development and 6 years of community management. Denis is very keen on block-chain technologies and believes that in 5-7 years it will become the world standard and revolutionize every industry that we know.

Ponaetti David CEO Specialist

David is a SEO enthusiast, professional of his business, who also cares about UX and Google's directives, as well as about the needs of customers. He specializes in search engine optimization, sees the position as it really stands. He works on optimization of conversion too. He likes hiking, reading spiritual books in his spare time, chess and biathlon.

Irina Sukhorukova PR-MANAGER, COMMUNITY MANAGER

Irina graduated from one of the universities of St. Petersburg with a degree in PR. She adores communication, worked for several years in a large media group in Russia, where she gained vast experience in advertising, PR and working with clients. Irina is engaged in linguistics and intercultural communications. She has experience in a premium design studio as an account manager.
